FOREIGN TRADE DIVISION
Emanuel A. Lipscomb, Chief

This edition of Classifications and Cross-Classifications was prepared in the Foreign Trade Division under the direction of Emanuel A. Lipscomb, Chief. He was assisted by Gerald F. Kotwas, Assistant Division Chief, for Commodity Programs. Kathryn H. Wright, Statistician (Economics) was responsible for developing the general format, technical supervision, and review of the various commodity classification systems. She was assisted by Donna L. Reynolds. Richard J. Pado prepared the computer programs.

This publication brings together the basic schedules of commodity and geographic trade classifications currently being used in the compilation and publication of U.S. foreign trade statistics. Included, for example, are the TSUSA (imports) and Schedule B (exports) classifications and their respective correlations to the categories comprising end-use and SIC-based product classifications. Schedule A (imports) including its cross-classification to TSUSA and Schedule E (exports) which has been converted on a one-for-one basis to Schedule B, also are included as are the individual Schedule A/E classification number assignments to the item descriptions shown in the selected commodity groupings and commodity tables of Report FT 990, *Highlights of U.S. Exports and Imports*. Similarly, Schedule C-E and C-I (both numerically and alphabetically arranged) and the individual country designations included in summary reports involving geographic trade areas are presented. Each Schedule of foreign trade classifications and/or cross-classifications comprises a separate section of the publication.

For the convenience of the users of this publication, changes which were effective during 1979 to the basic commodity classification systems (i.e., Sections 1 through 10) are presented in the addenda to this publication. Thus, this 1980 edition updates the information contained in the 1974 edition of the *"Cross-Classification"* and the 1978 edition of the *Correlations of Selected Export and Import Classifications Used in Compiling U.S. Foreign Trade Statistics*. This ready reference to cross-classifications, it is believed, permits better use and interpretation of commodity and geographic trade statistics in summary reports in the current program.

Unless otherwise noted, the classifications in this book are those in effect January through December 1980.

U.S. FOREIGN TRADE STATISTICS

Classifications and Cross-Classifications

1980

This section lists the approximately 4,600 statistical classification numbers in the *Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States,* 1978 edition, as amended by Public Bulletins B-1 through B-3, together with abbreviated commodity descriptions and, as applicable, units of quantity. Also aligned under their respective columns opposite each classification are the following additional codes used in defining Schedule B classifications in terms of the indicated statistical categories:

1. Schedule E number (7-digits) which has been established on a one-to-one basis from Schedule B, and rearranges Schedule B into *Schedule E, SITC-Based Classification of Commodities Exported from the United States.* Schedule E is a classification system based on the *Standard International Trade Classification (SITC), Revision 2.*[1]

2. Agricultural and nonagricultural code (1-digit): "O" indicates agricultural commodities; "1" indicates nonagricultural.

   Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Manufactured products, such as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered to be agricultural.

   The above guidelines which are used to classify commodities as "agricultural" are identical to those used by the Department of Agriculture, but differ from the guidelines used in the *Standard Industrial Classification (SIC) of the United States.*

3. End-use code (4-digits) used for rearranging and grouping basic Schedule B export data into end-use commodity categories. Tables E-7 and E-9 of Report *FT 990, Highlights of U.S. Export and Import Trade,* and Tabulation *EM 571, U.S. Exports in Terms of "End-Use" Commodity Categories* use this classification scheme. For a correlation between end-use export classifications and Schedule B numbers, see Section 3 of this publication.

4. SIC-based product code (8-digits) used for rearranging and grouping basic Schedule B export data into SIC-based product categories in Report *FT 610, U.S. Exports of Domestic Merchandise, SIC-Based Products by World Areas,* and in Tabulation *EA 676, U.S. Exports of Domestic and Foreign Merchandise—SIC-Based 8-digit Product Code by Country of Destination.* (See Section 4 for export SIC-based product classifications and the individual Schedule B numbers assigned to each.)

Schedule E Export Classifications
Correlated with Schedule B, SITC,
and FT 990 Codes

U.S. FOREIGN TRADE STATISTICS

Classifications and Cross-Classifications

1980

This section shows the outline of *Schedule E, SITC-Based Classification of Domestic and Foreign Commodities Exported from the United States,* with abbreviated commodity descriptions for the 1-,2-,3-, and 4-digit levels of summarization. For the detailed 7-digit Schedule E classifications both abbreviated commodity descriptions and the primary unit of quantity are shown, as well as the corresponding Schedule B number, SITC code, and the most detailed level of the FT 990 code (see Section 5).

The basic export statistics are initially collected and compiled in accordance with the commodity classifications in *Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States.* Effective with the January 1978 edition of Schedule B, the export classification schedule is based on the framework of the import classification system, *Tarriff Schedules of the United States Annotated* (TSUSA). In this table the approximately 4,600 Schedule B classifications have been converted, on a one-to-one basis, to a classification system—Schedule E, which is based on the *Standard International Trade Classification (SITC), Revision 2.*[1] (Prior to January 1978, the export statistics were presented only in terms of Schedule B classifications, which were based on the former SITC, revised.)

The numbering system of Schedule E is basically the same as the SITC. Whenever Schedule E 1-, 2-, and 3-digit numbers are the same as those in the SITC, it is believed that for most statistical purposes the commodity coverage can be considered essentially comparable, although the coverage is not always identical. Reasonable comparability for statistical purposes can also be expected, in most cases, when 5-digit Schedule E numbers are identical with SITC numbers. At the 4-digit level, the retention of an SITC number in Schedule E indicates similarity of coverage but the degree of comparability may in some cases be less at the 4-digit level for identical numbers in the two systems than at the 5-digit level. When a non-SITC number is used as the second, third, fourth, or fifth digit of a Schedule E number, comparability of coverage with any given SITC classification at the same level ordinarily does not exist, but there usually will be comparability involving combinations of the affected Schedules E or SITC classifications.

The sixth and seventh digits are added to provide more detailed breakdowns where such detail appears to be justified to reflect U.S. export trade characteristics. To this extent the detail shown is determined largely on the magnitude of trade in the various Schedule E commodities arranged within the SITC framework, with the two objectives of providing detailed data for commodities important in the U.S. export trade while also providing data in terms of the SITC outline which are comparable, insofar as possible, with Foreign Trade statistics compiled by other trading nations.

In the column labeled "SITC Code" where Schedule E comparability does not exist at the second, third, fouth, or fifth digit levels of the SITC code in Rev. 2, "0's" have been added to indicate the level of comparability. These are preliminary code assignments which will be updated in 1981.

U.S. FOREIGN TRADE STATISTICS

Classifications and Cross-Classifications

1980

This section shows the outline of the end-use classification scheme for recording U.S. export trade data, with the commodity description for each end-use category and the Schedule B numbers assigned to each end-use category at the most detailed level (4-digit). (See Section 1 for abbreviated Schedule B descriptions.)

The classification of U.S. export trade into broad summary commodity categories based on a concept of end-use demand was originated and developed a number of years ago by the Merchandise Trade Branch, Balance of Payments Division, Bureau of Economic Analysis (BEA). It represents a regrouping of the approximately 4,600 individual commodity numbers contained in *Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States* into 124 4-digit summary commodity groupings. The 4-digit coding system permits combining of the 124 groupings into broader and broader subcategories at the 3-, 2-, and 1-digit level. At the broadest (1-digit) level, the principal end-use categories of exports emerge as follows:

0 Food, feeds, and beverages
1 Industrial supplies and materials
2 Capital goods, except automobiles
3 Automotive vehicles, parts, and engines
4 Consumer goods (nonfood), except automotive
5 Special category domestic (military-type goods)
6 Exports, n.s.p.f. and reexports

Data for all the 124 export end-use groupings, together with the 3-, 2-, and 1-digit subcategories and categories into which they combine, are presented in tables E-7 and E-9 of Report *FT 990, Highlights of U.S. Export and Import Trade,* and in Tabulation *EM-571, U.S. Exports of Domestic and Foreign Merchandise, "End-Use. . . ."* End-use demand has fundamentally determined the assignment and regrouping of the basic Schedule B export commodity classifications into major summary categories, but within each major grouping there are subdivisions intended to reflect the physical nature of a commodity or its stage of production.

For a more complete description of the end-use system, see *"U.S. Merchandise Trade Exports and Imports—1965-1976, Classified by BEA End-Use Categories."*

SIC-Based Export Product Classifications
Correlated with Schedule B Numbers

U.S. FOREIGN TRADE STATISTICS

Classifications and Cross-Classifications

1980

This section shows the rearrangement of approximately 4,600 individual commodity classifications contained in *Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States,* into approximately 2,200 8-digit commodity classes based on the *Standard Industrial Classification* (SIC). (See Section 1 for abbreviated Schedule B descriptions.) Data in this arrangement are shown in Report *FT 610, U.S. Exports of Domestic Merchandise, SIC-Based Products by World Areas,* and in Tabulation *EA-676, U.S. Exports of Domestic and Foreign Merchandise,* 8-digit SIC-Based Commodity by Country Arrangement.

For the purpose of relating exports to output, the 5-digit product classes of the *Numerical List of Manufactured Products, 1977 Census of Manufactures* (MC77-R-1) were used as the starting point for manufactured products, and the 4-digit industry codes of the SIC, subdivided into 5-digit homogeneous classes of commodities, were used as the starting point for nonmanufactured products. Individual Schedule B numbers were then assigned to the SIC product class containing the same products as the Schedule B code. In instances where Schedule B numbers included items which should be classified in two or more SIC output product codes, an assignment was made to the SIC output product code in which principal content of the Schedule B numbers appeared to belong, where such an assignment would not significantly overcount the classification to which the Schedule B number was assigned or significantly undercount others in which it partly belonged. Where it appeared that assigning the entire content of a Schedule B number to a single SIC output product code would seriously distort the classification, the principal 5-digit output product codes were combined for the purposes of this presentation and the Schedule B number assigned to the combination. Such 5-digit combinations can be identified by the 6th digit of the code which can be interpreted as follows:

"0"	No combination
"A"	All within the same 4-digit class
"B"	All within the same 3-digit class but some different 4-digit classes
"C, H"	All within the same 2-digit class but some different 3-digit classes
"D, J"	All within the same division but some different 2-digit classes
"E"	Within different divisions
"X"	All 5-digit classes within the same 4-digit (or 3-digit) are included; A, B, and C, in the 5-digit for numbering sequence only.

The 7th and 8th digits are further subdivisions of the 6-digit codes which have been made to yield export classifications comparable to output classifications within the framework of SIC.

Since there are basic structural differences between Schedule B and SIC, a complete and precise presentation of exports in terms of the output commodity classification based on the SIC is not possible. However, this arrangement does identify the areas where exports and output are most comparable, and presents the information in convenient form for further summarization to 4-digit, 3-digit, and 2-digit SIC levels.

Selected Schedule E Export Commodity Groupings and Commodities Correlated with the Schedule E Numbers

U.S. FOREIGN TRADE STATISTICS

Classifications and Cross-Classifications

1980

This section relates commodity number composition of the selected commodity groupings and commodities described in export commodity summary tables E-2, E-5, and E-6 of Report *FT 990, Highlights of U.S. Export and Import Trade* to the appropriate numbers in *Schedule E, SITC-Based Classification of Domestic and Foreign Commodities Exported from the United States.* In general, the data presented in the export commodity-oriented summary tables include Schedule E section (1-digit) totals, selected division (2-digit), grouping (3-digit), and subgroup (4-digit) totals, and totals for leading commodities (7-digit) or combinations of commodities. (See Section 1 for abbreviated Schedule E descriptions.) The data presented in terms of these categories are intended to reflect the current pattern or highlights of U.S. export trade.

TSUSA Import Classifications

U.S. FOREIGN TRADE STATISTICS

Classifications and Cross-Classifications

1980

This section lists the approximately 11,300 statistical classification numbers in the *Tariff Schedules of the United States Annotated* (TSUSA), 1980 edition, as amended by Supplements 1 through 3, together with abbreviated commodity descriptions and, as applicable, units of quantity. Also aligned under their respective columns opposite each TSUSA classification are the following additional codes used in defining or grouping TSUSA classifications in terms of the indicated statistical categories:

1. Schedule A number (7-digits) used for rearranging and grouping basic TSUSA import data into *Schedule A, SITC-Based Classification of Commodities Imported into the United States,* which is a classification system based on the *Standard International Trade Classification (SITC), Revision 2.*[1] This commodity data is presented in monthly Report *FT 135, U.S. General Imports, Schedule A Commodity by Country.* For a correlation between Schedule A import classifications and TSUSA numbers, see Section 7 of this publication.

2. Agricultural and nonagricultural code (1 digit): "0" indicates agricultural commodities; "1" indicates nonagricultural. (See Section 1 for the guidelines used to classify commodities as "Agricultural.")

3. End-use code (4-digits) used for rearranging and grouping basic TSUSA import data into end-use commodity categories. Tables I-7, I-12, and I-13 of Report *FT 990, Highlights of U.S. Export and Import Trade,* and Tabulation *IM 171, U.S. General Imports of Merchandise, "End-Use" Commodity Categories by Selected Areas or Countries of Origin,* use this classification scheme. For a correlation between end-use import classifications and TSUSA numbers, see Section 8 of this publication.

4. SIC-based product code (8-digits) used for rearranging and grouping basic TSUSA import data into SIC-based product categories in Report *FT 210, U.S. Imports for Consumption and General Imports, SIC-Based Products by World Areas,* and in the Tabulation *IA 176, U.S. Imports for Consumption and General Imports, SIC-Based 8-digit Product Code by Country of Origin.* For a correlation between SIC-based import product classifications and TSUSA Numbers, see Section 9 of this publication.
